### **Programas**

Todos os programas foram feitos e estão funcionando.

**Programa 2:** um programa que lê um valor de uma determinada posição (carregada no início), se o número for menor que zero coloca -1 no início da posição de memória para saída; se for maior que zero este é o número de valores da sequência de Fibonacci a serem escritos em sequência a partir de uma posição de memória.

```
public Word[] p2FibonacciJMP = new Word[] {
     new Word(Opcode.LDI, 0, -1, 8),
     new Word(Opcode.STD,0,-1,25),
     new Word(Opcode.LDD, 1, -1, 25),
     new Word(Opcode.LDI, 7, -1, 8),
     new Word(Opcode.JMPIG, 7, 1, -1),
     new Word(Opcode.LDI, 3, -1, -1),
     new Word(Opcode.STD,3,-1,26),
     new Word(Opcode.STOP, -1, -1, -1), // 7
     new Word(Opcode.LDI, 0, -1, 0),
     new Word(Opcode.LDI, 1, -1, 1),
     new Word(Opcode.LDI, 2, -1, 27),
     new Word(Opcode.LDD, 3, -1, 25),
     new Word(Opcode.LDI, 7, -1, 7),
     new Word(Opcode.STX, 2, 0, -1),
     new Word(Opcode.ADDI,2,-1,1),
     new Word(Opcode.SUBI,3,-1,1),
     new Word(Opcode.JMPIE, 7, 3, -1),
     new Word(Opcode.STX, 2, 1, -1),
     new Word(Opcode.ADDI,2,-1,1),
     new Word(Opcode.SUBI,3,-1,1),
```

```
new Word(Opcode.JMPIE, 7, 3, -1),
new Word(Opcode.ADD,0,1,-1),
new Word(Opcode.ADD,1,0,-1),
new Word(Opcode.JMP, -1, -1, 13)
};
```

**Programa 3:** dado um inteiro em alguma posição de memória, se for negativo armazena -1 na saída; se for positivo responde o fatorial do número na saída.

```
public Word[] p3Fatorial = new Word[] {
     new Word(Opcode.LDI, 0, -1, 5),
           new Word(Opcode.STD,0,-1,30),
     new Word(Opcode.LDD, 1, -1, 30),
     new Word(Opcode.LDI, 7, -1, 11),
     new Word(Opcode.LDI, 6, -1, 18),
     new Word(Opcode.LDI, 5, -1, 21),
           new Word(Opcode.JMPIG, 7, 1, -1),
     new Word(Opcode.JMPIE, 6, 1, -1),
     new Word(Opcode.LDI, 3, -1, -1),
     new Word(Opcode.STD,3,-1,31),
     new Word(Opcode.STOP, -1, -1, -1), // 10
     new Word(Opcode.LDI, 4, -1, 16),
     new Word(Opcode.LDD, 0, -1, 30),
     new Word(Opcode.LDD, 1, -1, 30),
     new Word(Opcode.SUBI, 1, -1, 1),
     new Word(Opcode.JMPIE, 5, 1, -1), // 15
     new Word(Opcode.MULT,0,1,-1),
     new Word(Opcode.SUBI, 1, -1, 1),
     new Word(Opcode.JMPIG, 4, 1, -1),
     new Word(Opcode.STD,0,-1,31),
     new Word(Opcode.STOP, -1, -1, -1),
```

```
new Word(Opcode.LDI, 0, -1, 1),
new Word(Opcode.STD,0,-1,31),
new Word(Opcode.STOP, -1, -1, -1),
new Word(Opcode.LDI, 0, -1, 1),
new Word(Opcode.STD,0,-1,31),
new Word(Opcode.STOP, -1, -1, -1)
```

**Programa 4:** para um N definido (5 por exemplo) o programa ordena um vetor de N números em alguma posição de memória; ordena usando bubble sort loop ate que não swap nada passando pelos N valores faz swap de vizinhos se da esquerda maior que da direita.

```
public Word[] p4BubbleSort = new Word[] {
    new Word(Opcode.LDI, 0, -1, 12), //carregando valor na memoria
    new Word(Opcode.STD, 0, -1, 40),

new Word(Opcode.LDI, 0, -1, 20),
new Word(Opcode.STD, 0, -1, 41),

new Word(Opcode.LDI, 0, -1, 12),
new Word(Opcode.STD, 0, -1, 42),

new Word(Opcode.STD, 0, -1, 43),

new Word(Opcode.LDI, 0, -1, 29),
new Word(Opcode.STD, 0, -1, 29),
new Word(Opcode.STD, 0, -1, 44),
```

```
new Word(Opcode.LDI, 0, -1, -12),
new Word(Opcode.STD, 0, -1, 45),
new Word(Opcode.LDI, 0, -1, 0),
new Word(Opcode.STD, 0, -1, 46),// valores carregados
new Word(Opcode.LDI, 3, -1, 6),
new Word(Opcode.LDI, 4, -1, 6),
new Word(Opcode.LDI, 5, -1, 20),
new Word(Opcode.LDI, 6, -1, 33),
new Word(Opcode.LDI, 7, -1, 38),
new Word(Opcode.LDI, 0, -1, 40),
new Word(Opcode.JMPIE, 6, 3, -1), //inicio loop
new Word(Opcode.SUBI, 3, -1, 1),
new Word(Opcode.LDX, 1, 0, -1),
new Word(Opcode.ADDI, 0, -1, 1),
new Word(Opcode.LDX, 2, 0, -1),
new Word(Opcode.SUB, 2, 1, -1),
new Word(Opcode.JMPIG, 5, 2, -1),
new Word(Opcode.LDX, 2, 0, -1),
new Word(Opcode.STX, 0, 1, -1),
new Word(Opcode.SUBI, 0, -1, 1),
new Word(Opcode.STX, 0, 2, -1),
new Word(Opcode.ADDI, 0, -1, 1),
new Word(Opcode.JMPI, 5, 0, -1),
```

```
new Word(Opcode.JMPIE, 7, 4, -1),

new Word(Opcode.SUBI, 4, -1, 1),

new Word(Opcode.LDI, 0, -1, 40),

new Word(Opcode.LDI, 3, -1, 6),

new Word(Opcode.JMPIG, 5, 0, -1),//fim do loop

new Word(Opcode.STOP, -1, -1, -1)
```
